

## *Natus...Where Babies Come First.*

Natus is pleased to support our customers in the **Baby-Friendly Hospital Initiative (BFHI)**.

Natus supports our customers who have achieved or are striving to achieve baby-friendly status with our select newborn care products.

### neoBLUE<sup>®</sup> Blanket LED Phototherapy System

Baby can be held and/or nursed without interrupting phototherapy treatment — encouraging infant-parent bonding.

The portable & lightweight design allows easy transport to different locations, such as the mother's room, well baby nursery, and the NICU. The neoBLUE blanket also fits easily within existing patient enclosures, such as cribs, bassinets, radiant warmers and incubators.

A specially designed neoBLUE Swaddle is available to keep baby warm and secure...or use your own baby blanket.

### ALGO<sup>®</sup> 5 Newborn Hearing Screener

The ALGO 5 screener can be wheeled room to room on a mobile cart that contains all supplies needed for screening. Cart includes large wheel and push handle for easy transport, and also holds either a label or page printer so you can print the results immediately after screening and provide the parents with any needed documentation. The ALGO 5 screener's hibernate feature allows you to move the device without requiring the computer to reboot between babies.

The fully automated ALGO 5 screener does not require handling during screening so all your focus can be where it is needed most...on the baby. And, with simultaneous screening and simple to use electrodes and ear couplers, the baby can be prepped in a matter of seconds.
